
Zero-shot rows (shaded): the TensorFlow column is the paper's TF model (ckpt-60); the released-PyTorch and port columns use the released PyTorch checkpoint, a different model. Port = released PyTorch code: 0.6021 / 0.5152 (within / new); maximum per-session |diff| 0.0000 over 21 sessions (panel b). Baseline and PCA rows involve no checkpoint (released-PyTorch column n/a).
